

WEB HOSTING ALERTS - MONITORING SERVICE

HostMonitor is a hosted website monitoring service which helps you monitor the uptime and performance of your websites, online applications and servers. The monitoring is done from multiple geographical locations across the world thus giving you a global perspective of the end-user experience.

With a global monitoring network, HostMonitor helps you determine if a problem is localized to specific networks or something that affects all your customers. The web application monitoring capability simplifies multi-step web transaction management and ensures your end users are able to complete transactions such as online purchase through a shopping cart, login checks, etc.

Monitor Your Website and Services for Downtime, Exploits and Blacklistings

Get alerted when your website, email, DNS or other service is unavailable, hacked or has been blocklisted.

External monitoring - *no installation required!*

Alerts you via

- SMS
- Twitter (Authenticate your Twitter ID)
- Email
- RSS Feeds
- Phone Call (Roadmap)
